HS117715

Human DNA sequence from clone RP5-117715 on chromosome 22q13.1

Contains a novel gene, the MSES5 gene for serum constituent protein

MSES5, the LGALG2 gene for soluble Galactose-binding Lectin 2

(Galectin 2, S-Lac Lectin 2, HL14), ESTS, an STS, GSSs and two

putative CpG islands, complete sequence.

AL022315

AL022315.1 GI:3820991

HTG; CpG island; galectin; LGALS2; MSES5.

Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this cone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                           This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polymorphisms exist between AC103564, AC093724 and AJ239322. Data from AC093724 was used to finish AC103564. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NEICHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is AJ239322, 2000 bp overlap.
Actual start of this clone is at base position 1 of RPI1-788A1.

On Dec 19, 2003 this sequence version replaced gi:30984143.
Gense were predicted from the integrated results of the following:
Gense were predicted from the integrated results of the following:
GENSCAN (http://CGR-081.mit.edu/GenseArk/), GlimmerM
(http://www.softberry.com/), GeneMark.hmm
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://www.tigr.org/software/glimmerm/), BIASTN and BLASTX. The
genomic sequence was searched against NGBI NonRedundant Protein
database. nr (ftp://ncbi.nlm nib.gov/blast/db) and the cDNA
sequence database at RGP or DDBJ. Protein homologies of the coding
regions were searched against NGBI NonRedundant Protein database
with BLASTP. EST represent the identified CDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Pull-length cDNAs represent the identified CDNA sequences using
BLASTN with the corresponding DDBJ accession no.
A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and 'like protein. A gene without
significant homology to any protein but with full-length cDNA or
EST homology (covering almost the entire length of partial
sequence) is classified as an 'unknown' protein. A gene predicted
by two or more gene prediction programs is classified as a
hypothetical protein according to RESP standard. A gene
producted by a single gene prediction program is also classified as a
miscellaneous feature of the sequence
is probable 'hypothetical' protein and is included as a
miscellaneous feature of the sequence
is the protein and is included in the protein is classified base and the protein is classified base and the protein is classifi

           The present sequence is that of a D type CpG oligodeoxynucleotide that is an example of claimed D type oligodeoxynucleotides (see ACC48294) of the invention. Mature dendritic cells are obtained by contacting a dendritic cell precursor, such as amonoxyte, with such an oligodeoxynucleotide. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antigen presentation. Mature dendritic cells are useful for tumour immunotherapy, for augmenting an immune response to an infectious agent or to a vaccine, and as vaccines to prevent future infection or to activate the immune system to treat diseases such as cancer. Mature dendritic cells may also be used to

The invention assertions a method of intreasury an immune response to an opportunistic infection in an immunocompromised subject involves administering an immunostimulatory D oligodeoxynuclectide or an immunostimulatory K oligodeoxynuclectide, where an antigenic epitope of a immunostimulatory K oligodeoxynuclectide, where an antigenic epitope of a increasing an immune response to an opportunistic infection e.g. infection with a lentivirus such as human immunodeficiency virus (including HIV-1, HIV-2) e.g. AIDS; infections; protozoan infections; cinfections; fungal infections; viral infections; protozoan infections; prion disease; and nucleoplasm in an immunocompromised subject or a subject infected with a lentivirus. The bacterial infections include subject or a cupiomatosis, sphilis and neurosyphilis, tuberculosis and bacillary condidomycosis, the fungal infections include cryptosporidiosis, candidiasis, condidiomycosis, cryptococcal meningitis, hepatitis B, and histoplasmosis, the protozoal infections include cryptosporidiosis, cryptosporidiosis, neumocystis cartini pneumonia and tisoplasmosis, viral infections include cytomegalovirus, hepatitis, contegiosum, oral hairy leukoplakia and progressive multifect contegiosum, oral hairy leukoplakia and progressive multifect includes HSV, genital herpes simplex includes HSV, genital herpes simplex includes HSV, genital herpes where immunost in an extra cand cervical cancer. The method stimulates immune responses to any correspondent and immunocompromised subjects. This sequence recorrection in immunocompromised subjects. This sequence readers and extra an immunocation in immunocompromised subjects. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drug activity monitoring; expression profile; gene expression; peripheral blood sample; peripheral blood mononuclear cell; drug therapy; CCI-779; immunosuppressant; rapamycin; mammalian target of rapamycin;
                                                                                                                             invention describes a method of increasing an immune response to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           represents an immunostimulatory CpG oligonuclectide sequence that stimulate the release of cytokines from cells of the immune system and can be used to increase immune response in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions tar targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, of the ability to bind a P. aeruginosa uncleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of preducing and in detection of P. aeruginosa sequences or other sequences of preducing and in detection of P. aeruginosa sequence of P. ABD1967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed prediction but, was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 963 BP; 140 A; 330 C; 334 G; 159 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of monitoring drug activities in vivo by comparing an expression profile of at least one gene in a peripheral blood sample of a patient to a reference expression profile of the at least one gene, where the at least one gene is differentially expressed in peripheral blood mononuclear cells (PBMCs) of patients who have a nonblood disease and are subjected to a drug therapy as compared to PBMCs isolated from the patient before the drug therapy, and where the patient has the non-blood disease and is being treated by the drug therapy. The method, kit, and nucleic acid array are useful for monitoring drug cutivities in vivo. The drug is especially CCI-779, an ester analogue of the immunosuppressant rapamycin which is a potent inhibitor of the mammalian target of rapamycin (mTOR). This sequence represents a gene mammalian target of rapamycin (mTOR). This sequence represents a gene conform part of the printed specification but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences/).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                       Monitoring drug activities in vivo comprises comparing an expression profile of a gene in a peripheral blood sample of a patient before and after drug therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to Pseudomonas aeruginosa polypeptides and the polymuclectides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide,

                                                  ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                   ;
for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD1397-Bab17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human breast cancer expressed polynucleotides (AALO744-AAL57789) and methods of assessing whether a patient is affilted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity
                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New peptide useful as a marker for the diagnosis of breast cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic

```
The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (S1). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACNY8851-ACN2934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene potential; multi-lineage; cell commitment; haematopoietic stem cell; HSC; multipotent progenitor; MPP; common lymphoid progenitor; CLP; common myeloid progenitor; CMP; bone marrow stem cell; mouse; murine; ds.

unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete subpopulation where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCs), as well as the nonself renewing multipotent progenitors (MPBs), common lymphoid progenitors (CLPs) and common myeloid progenitors (GMPs), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; probe; 88; gene expression; single exon probe; microarray; alternative splicing event; genomic alteration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                            This invention relates to a novel method for predicting gene potential by associating nucleic acid sequences of unknown function with particular sub-population profiles. Specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCS), as well as the nonself renewing multipotent progenitors (MPBS), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                   Classifying an unknown multi-lineage affiliated gene comprises isolating expressed nucleic acid sequences from the discrete cell sub-populations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acids sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human genome-derived single exon nucleic acid probes useful for humagene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 15; SEQ ID NO 4446; 80pp; English.

cc exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid acids contiguous amino acids of selling and/or licensing single exon probes or microarrays to sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above. Cc acid contains a database having a plurality of records human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records cleach record including data on the expression of a single exon probe cc expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising containing the spicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, cor in expressing the ORP-encoded peptide. The sequence is a human construct of the printed specification, but was obtained consider acceptance of single exon probe of the invention. Note: The sequence data for this encoded acceptance of the synthesis of nucleic acids, considers are the directly from USFO at the sequence of supersections and acceptance of supersections and acceptance of supersections are supersections and acceptance of supersections and acceptance of supersections and acceptance of the printed specification, but was obtained and acceptance of supersections and supe

Specifically, it refers to the regulation of gene expression in
the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (1) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (1) is useful as marker for breast cancer and in breast cancer therapy. Sequences given in records ACM78851-ACM293914 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974

         Increased RNA degradation. The present invention describes clusters of polynocleotides from cereals, in particular rice, as well as homologues and the polypoptide sequences defrived thereof, where gene expression is altered in response to PTGS. As such, the elucidation of gene silencing mechanisms can lead to more efficiently expressed transgenes, and can also improve the understanding of plant-viral interactions and targeting the suppression of specific plant genes. This polynucleotide sequence is a rice cDNA sequence where expression is modulated by gene silencing, or a present in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID=20030135888.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide, useful for modulating gene expression within a cell
                                                                                                                                                                                                                                                                                        Gaps

Claim 1; SEQ ID NO 99; 79pp; English.

```
This invention relates to a novel method for identifying isolated proposed transcriptional gene silencing polynucleotides that are modulated by post-transcriptional gene silencing (PTGS). Specifically, it refers to the regulation of gene expression in plants via PTGS and the trans-activation of homologous genes due to increased RNA degradation. The present invention describes clusters of polynucleotides from cereals, in particular rice, as well as homologues and the polypeptide sequences derived thereof, where gene expression is altered in response to PTGS. As such, the elucidation of gene silencing mechanisms can lead to more efficiently expressed transgenes, and can also improve the understanding of plant-viral interactions and targeting the suppression of specific plant genes. This polynucleotide sequence is a rice DNA sequence where expression is modulated by gene silencing, given in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò

poww-spoRT6; Site_l: Not1; Site_2: EccRV (destroyed); RNA
source anonymous pool of 6 male_brains, age range_23-27;
male_lung, age_27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EccRV site_is
destroyed upon cloning). Average insert size 1:8 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.
Gruber (Invitrogen). Research Genetics tracking code
021. Note: this is a NIH_MGC Library."
Male blood DNA was isolated from one randomly chosen donor and partially digested with a combination of EcoRI and ECORI Methylase. Size selected DNA was cloned into the pBACe3.6 vector at ECORI sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /dlone lib=H8"
/note="Vector: pBluescript SK+; Site_1: EcoRI (5'-end of CDNA); Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamH1, SalI, PBLI). NOTE: Also due to the cloning system used Blue/white selection for recombinate is not 100% reliable."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota, Metazoa, Chordata, Craniata, Vertebrata; Euteleostomi, Mammalla; Eutheria, Primates; Catarrhini, Hominidae, Homo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
